

EOD WORK REPORT

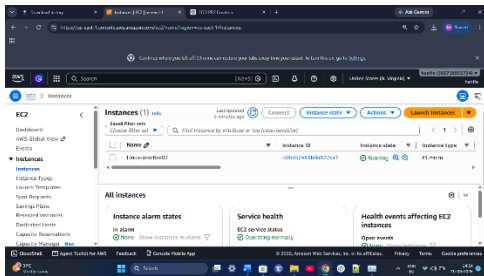

Topic: AWS EC2, Jenkins and Apache Web Server Setup

1. Work Completed

Task	Status
AWS EC2 instance launched	Completed
EC2 instance access / connection	Completed
Jenkins installation	Completed
Jenkins service setup and verification	Completed
Apache Tomcat installation	Completed
Apache tomcat setup and verification	Completed

2. EC2 Setup

An AWS EC2 instance was launched and configured for the DevOps practice environment. The instance was accessed successfully and prepared for application and web-server setup.

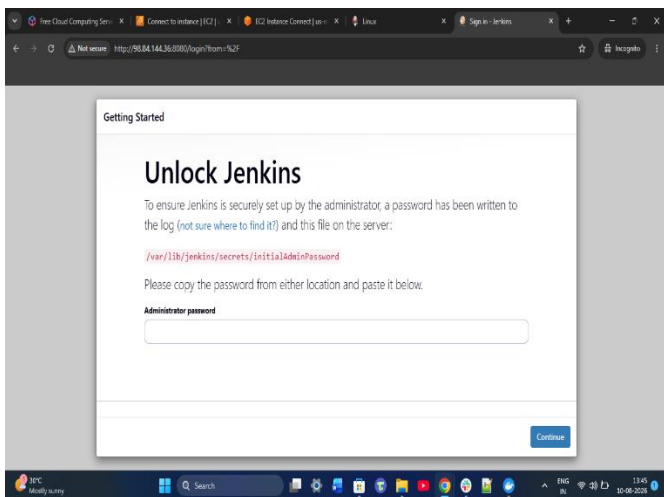

3. Jenkins Setup

Jenkins was installed on the EC2 instance. The Jenkins service was configured and verified to ensure that the CI/CD server is available for further pipeline practice.

Completed activities:

- Jenkins installation
- Jenkins service configuration
- Jenkins service status verification
- Basic Jenkins access verification

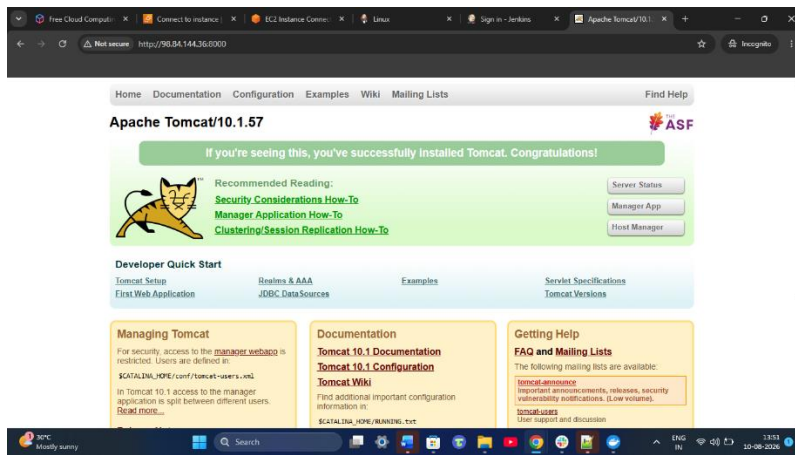

4. Apache Tomcat Setup

Apache Tomcat was installed and configured on the EC2 instance. The Tomcat service was started and verified successfully for Java web application deployment.

Completed activities:

- Apache Tomcat installation
- Tomcat service configuration
- Tomcat service start and enable configuration
- Tomcat service status verification
- Basic Tomcat server access verification

5. EOD Summary

Today, I launched and configured an AWS EC2 instance, completed Jenkins installation and setup, and completed Apache tomcat installation and configuration. The required services were verified successfully, and the EC2 environment is ready for further DevOps practice.

Status: Completed
