

EOD Report

****Date:** 17 August 2026**

****Topic:** Bash Scripting and Crontab**

Tasks Completed

Bash Script Tasks

The screenshot shows a terminal window in AWS CloudShell. The user is in the directory `/scripts` and has run the command `ls -l`. The output shows a list of files and their permissions, including `loop.sh`, `service02.sh.swo`, `all.sh`, `backup.sh`, `cpu.sh`, `direct.sh`, `memory.sh`, `monitor.sh`, `root/`, `service.sh`, `service02.log`, and `service02.sh`. The user has also run the command `cat /etc/passwd`, which shows the output of the command.

1. Created a Bash script to check whether a directory is available or not.
2. Created a Bash script to create multiple files.
3. Created a Bash script to take a backup of a directory.

The output shows a list of files and their permissions, including `loop.sh`, `service02.sh.swo`, `all.sh`, `backup.sh`, `cpu.sh`, `direct.sh`, `memory.sh`, `monitor.sh`, `root/`, `service.sh`, `service02.log`, and `service02.sh`. The user has also run the command `cat /etc/passwd`, which shows the output of the command.

4. Created a Bash script to install Nginx on an EC2 server.

5. Created a Bash script to install Apache Tomcat on an EC2 server.

6. Created a Bash script to check whether the Nginx service is running and start it if it is stopped.

7. Created a Bash script for a calculator.

8. Created a Bash script to check whether a directory exists and create it if it does not exist.

9. Created a Bash script to delete the last 3 lines of a file.

10. Created a Bash script to monitor CPU utilization and trigger an email notification when usage exceeds 80%.

11. Created a Bash script to monitor disk utilization and trigger an email notification when usage exceeds 80%.

12. Created a Bash script to monitor memory utilization and trigger an email notification when usage exceeds 80%.

Crontab Exercises

1. Created a cron entry for ****April 5th at midnight****.
2. Created a cron entry for the ****5th of January, June, and November when it falls on Thursday****.
3. Created a cron entry for ****05 and 27 minutes during the 9th, 10th, and 11th hours every day****.
4. Created a cron entry for ****09:34 AM on 15th August****.
5. Created a cron entry to run ****every midnight****.
6. Created a cron entry for ****Saturday at 11:59 PM****.
7. Created an ****@reboot**** cron entry to execute a task after every system reboot.
