

EOD Report – CloudTrail & CloudWatch Monitoring

Date: 09 September 2026

Environment: AWS CloudTrail, CloudWatch, SNS, EC2

1. CloudTrail Monitoring

- Enabled CloudTrail.
- Stored CloudTrail events in S3.
- Sent CloudTrail events to CloudWatch Logs.
- Verified event logging.

The screenshot shows the AWS CloudTrail console. A green notification banner at the top states "Trail successfully created". Below this, the "Trails" section displays a table with the following data:

Name	Home region	Multi-region trail	ARN	Insights	Organization trail	S3 bucket	Log file prefix
trail01	US East (N. Virginia)	Yes	arn:aws:cloudtrail:us-east-1:382736933724:trail/trail01	Enabled	No	aws-cloudtrail-logs-382736933724-15d9d319	-

The screenshot shows the details of the trail named "aws-cloudtrail-logs-382736933724-15d9d319". The details are as follows:

Name	AWS Region	Creation date
aws-cloudtrail-logs-382736933724-15d9d319	US East (N. Virginia) us-east-1	September 9, 2026, 16:12:34 (UTC+05:30)

The screenshot shows the AWS CloudWatch console, specifically the "Log group details" for the log group "aws-cloudtrail-logs-382736933724-467d0747". The details are as follows:

Log class	Subscription filters	Custom field indexes
Standard	0	Configure
ARN	Contributor Insights rules	Transformer
arn:aws:logs:us-east-1:382736933724:log-group:aws-cloudtrail-logs-382736933724-467d0747:*	-	Configure
Creation time	KMS key ID	Anomaly detection
6 minutes ago	-	Configure
Retention	Deletion protection	Bearer token authentication
Never expire	Off	Off
Stored bytes	Data protection	Syslog ingestion
-	-	Info
	Sensitive data count	Configure
	-	

2. SNS Email Alerts

- Created SNS topic.
- Added email subscription.
- Confirmed email subscription.
- Configured alerts through SNS.

3. EC2 CloudWatch Monitoring

- Monitored EC2 CPU utilization.
- Monitored other available EC2 metrics.
- Verified metrics in CloudWatch.

The screenshot displays the AWS CloudWatch Metrics console. At the top, there's a navigation bar with the AWS logo, a search bar, and various utility icons. The main header shows the current page is 'Metrics' for a specific EC2 instance. Below this, there's a 'Metrics' section with a 'Browse (304)' link and a table of metrics. The table has columns for 'No name specified', 'Multi source query', 'Graphed metrics', 'Options', and 'Source'. The metrics listed are:

No name specified	Multi source query	Graphed metrics	Options	Source
☐	No name specified	i-0435b42d733ea...	StatusCheckFailed_System ⓘ	No alarms
☐	No name specified	i-03598a28165fc6...	NetworkPacketsOut ⓘ	No alarms
☐	No name specified	i-03598a28165fc6...	NetworkPacketsIn ⓘ	No alarms
☐	No name specified	i-03598a28165fc6...	NetworkIn ⓘ	No alarms
☐	No name specified	i-00ce76e0e0d0c...	NetworkPacketsOut ⓘ	No alarms

Below the table, there are several line graphs showing the following metrics:

- CPU utilization (%):** Percent, 0.23%, 0.11%, 0%.
- Network in (bytes):** Bytes, 9.585k, 4.842k, 0.
- Network out (bytes):** Bytes, 8.405k, 4.203k, 0.
- Network packets in...:** Count, 48, 24, 0.
- Network packets o...:** Count, 48, 24, 0.
- Metadata no token ...:** Count, 1, 0.5, 0.
- CPU credit usage (c...):** Count, 0.65, 0.33, 0.
- CPU credit balance ...:** Count, 49.69, 24.85, 0.

4. CPU Utilization Alarm

- Created CloudWatch alarm.
- Condition: **CPU utilization > 70%**
- Alarm sends notification through SNS email.

The screenshot displays a Gmail inbox with an email from AWS CloudWatch. The email details an alarm named 'cpu-above-70' that has transitioned to the 'ALARM' state. The reason for the state change is that the 'Threshold Crossed: 1 out of the last 1 datapoints [49.46249827762847 (10/09/26 06:32:00)] was greater than the threshold (30.0) (minimum 1 datapoint for OK -> ALARM transition)'. The email also provides the alarm's name, description, state change, reason for state change, timestamp, AWS account, and alarm ARN.

Below the email, the AWS console interface for the CloudWatch Alarms page is shown. The 'Alarms (1/1)' section displays a table with the following information:

Name	State	Actions	Actions muted	Last state update (Local)
cpu-above-70	In alarm	Actions enabled	-	2026-09-10 12:07:10

5. Tomcat Monitoring

- Created CloudWatch dashboard.
- Configured Tomcat service monitoring.
- Configured alert when Tomcat is stopped/not running.
- Connected alert to SNS email.

The top screenshot shows a Gmail notification email from AWS. The email states that the Amazon CloudWatch Alarm "tomcat-service" in the US East (N. Virginia) region has entered the ALARM state because the threshold was crossed. It provides details about the alarm, including its name, description, state change, reason for state change, timestamp, AWS account, and alarm ARN. A link is provided to view the alarm in the AWS Management Console.

The bottom screenshot shows the AWS CloudWatch Alarms console. A green banner at the top indicates "Successfully created alarm tomcat-service." The console displays a list of alarms with the following details:

Name	State	Actions	Actions muted	Last state update (Local)
tomcat-service	In alarm	Actions enabled	-	2026-09-10 13:19:03
cpu-above-70	OK	Actions enabled	-	2026-09-10 12:21:10

6. Nginx Monitoring

- Created CloudWatch dashboard.
- Configured Nginx service monitoring.
- Configured alert when Nginx is stopped/not running.
- Connected alert to SNS email.
