

# EOD Document – Jenkins Freestyle Jobs

**Date:** 03 October 2026

**Task:** Create Jenkins Freestyle Jobs with Git Clone, SonarQube and Slack Integration

## Objective

Created two Jenkins **Freestyle Jobs**. Each job contains the following three stages:

1. **Git Clone** – Clone source code from GitHub.
2. **SonarQube Integration** – Perform code-quality analysis.
3. **Slack Integration** – Send build status notification to Slack.

## Job 1 – VProfile

### GitHub Repository

<https://github.com/betawins/VProfile-1.git>

### Jenkins Job Name

VProfile-Freestyle

## Job Configuration

Go to:

**Jenkins → New Item → Freestyle project**

Enter:

VProfile-Freestyle

Select **Freestyle project** and click **OK**.

## Stage 1 – Git Clone

Go to:

**Source Code Management → Git**

Configure:

Repository URL:

<https://github.com/betawins/VProfile-1.git>

Branch:

\*/main

### Purpose

Jenkins automatically checks out/clones the source code into the Jenkins workspace.

## Stage 2 – SonarQube Integration

Go to:

**Build → Add build step → Execute shell**

Use:

```
sonar-scanner \
-Dsonar.projectKey=vprofile \
-Dsonar.projectName=vprofile \
-Dsonar.sources=.
```

## Purpose

SonarQube analyzes the source code and checks for:

- Bugs
- Vulnerabilities
- Code smells
- Duplicate code
- Code quality issues

The results can be checked in the SonarQube dashboard.

## Stage 3 – Slack Integration

Go to:

**Post-build Actions → Add post-build action → Slack Notifications**

Configure the Slack notification according to the configured Slack workspace/channel.

For example:

Channel: #devops

Select the required notification options such as:

Notify Success

Notify Failure

## Purpose

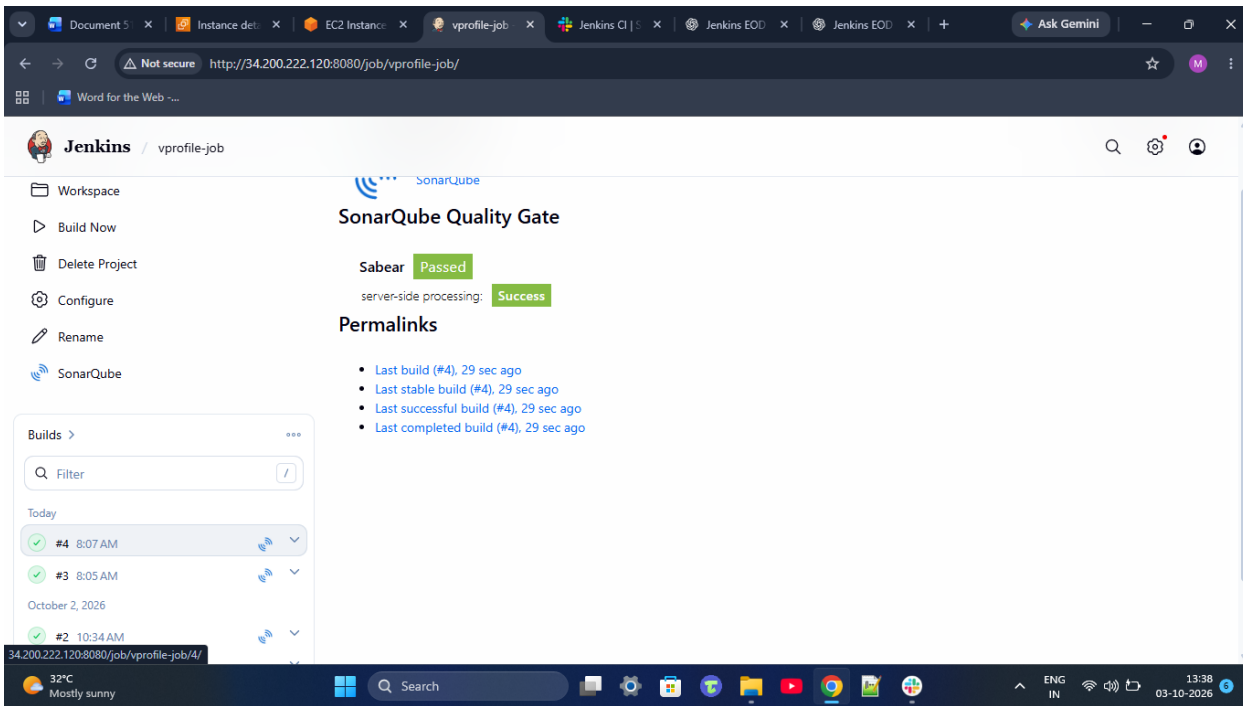

Slack sends the Jenkins build status to the team.

Example:

VProfile-Freestyle

SUCCESS

## Job 2 – Hiring App

### GitHub Repository

<https://github.com/betawins/hiring-app.git>

### Jenkins Job Name

Hiring-App-Freestyle

### Job Configuration

Go to:

**Jenkins → New Item → Freestyle project**

Enter:

Hiring-App-Freestyle

Select **Freestyle project** and click **OK**.

### Stage 1 – Git Clone

Go to:

**Source Code Management → Git**

Configure:

Repository URL:

<https://github.com/betawins/hiring-app.git>

Branch:

\*/main

Jenkins will clone the source code into the workspace.

## Stage 2 – SonarQube Integration

Go to:

**Build → Add build step → Execute shell**

Use:

```
sonar-scanner \  
-Dsonar.projectKey=hiring-app \  
-Dsonar.projectName=hiring-app \  
-Dsonar.sources=.
```

SonarQube will analyze the Hiring App source code.

## Stage 3 – Slack Integration

Go to:

**Post-build Actions → Add post-build action → Slack Notifications**

Configure the Slack channel:

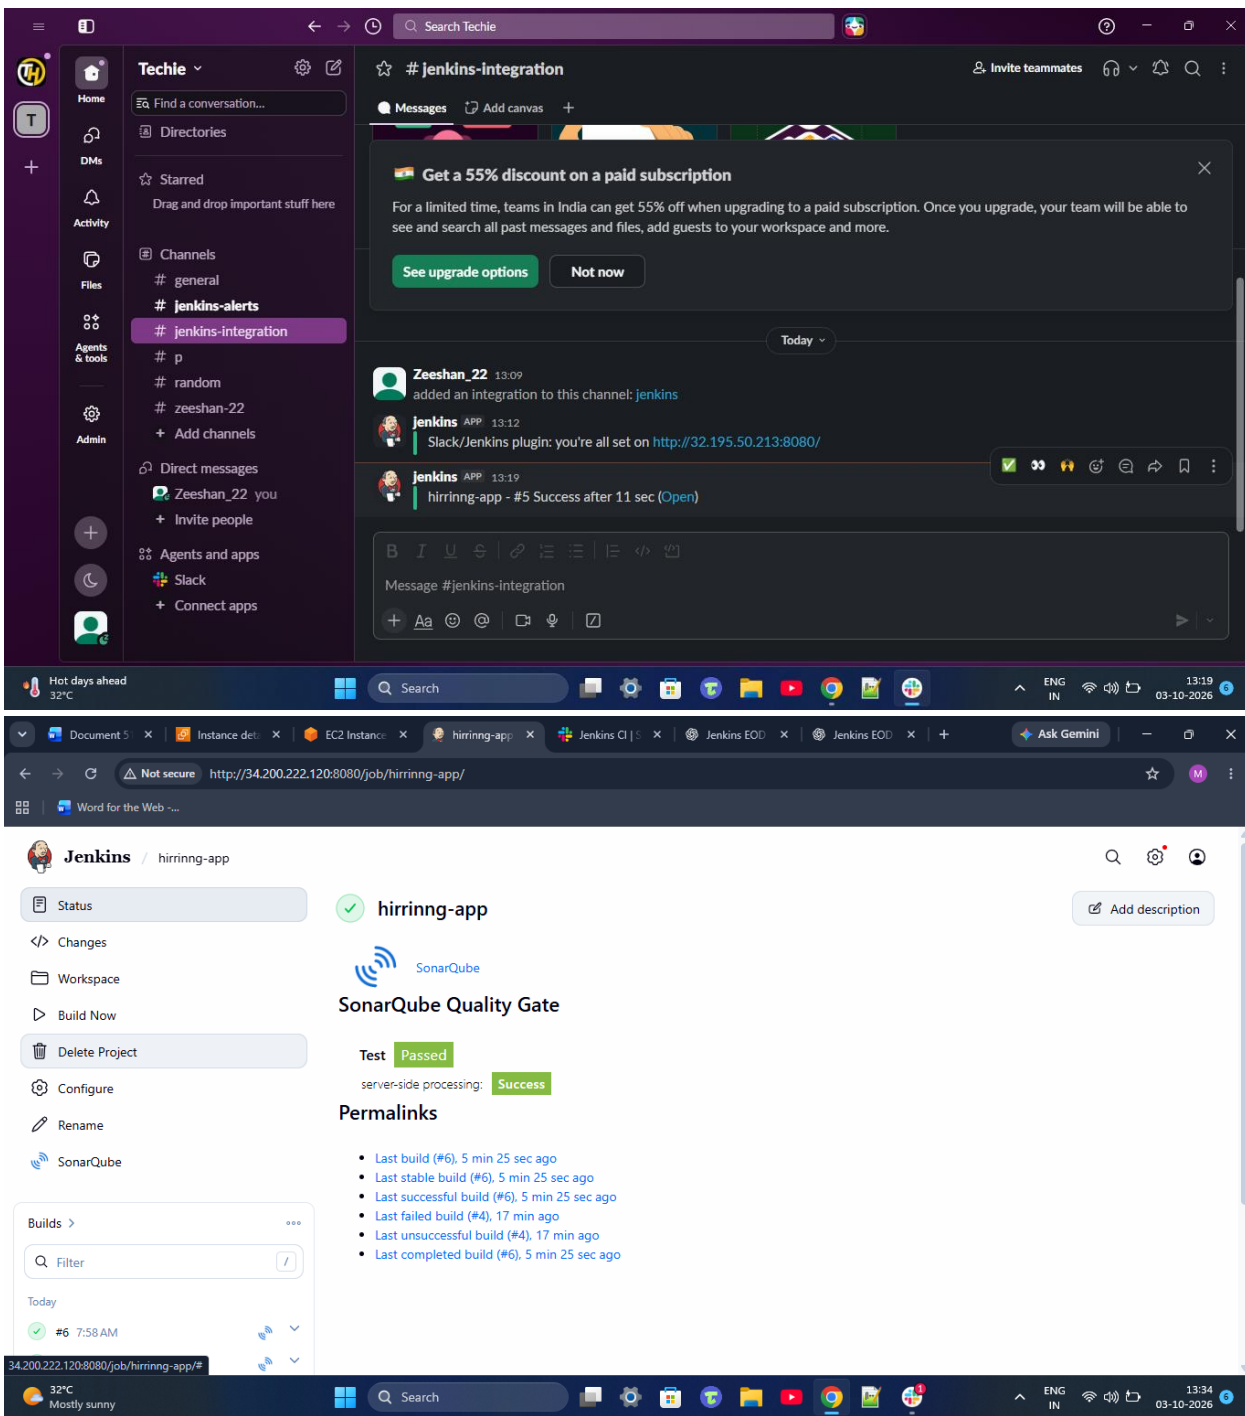

#devops

Enable the required success/failure notifications.

Example:

Hiring-App-Freestyle

SUCCESS

# Overall Freestyle Job Flow

## VProfile

GitHub

VProfile-Freestyle

Git Clone / Checkout

SonarQube Analysis

↓

Hiring-App-Freestyle  
↓  
Git Clone / Checkout  
↓  
SonarQube Analysis  
↓  
Slack Notification

## Required Jenkins Configuration

Before running the jobs, the following should be configured in Jenkins:

### Plugins

- Git Plugin
- SonarQube Scanner Plugin
- Slack Notification Plugin

### SonarQube

Configure the SonarQube server under:

**Manage Jenkins → System → SonarQube servers**

Example:

Name: SonarQube

Server URL: <http://<SONARQUBE-IP>:9000>

Authentication Token: <SONARQUBE-TOKEN>

### SonarQube Scanner

Configure under:

**Manage Jenkins → Tools**

Add the SonarQube Scanner installation if required.

### Slack

Configure the Slack workspace/credentials under Jenkins and select the required Slack channel for notifications.

## Verification

After configuring both jobs:

### VProfile-Freestyle

Click:

**Build Now**

Verify:

- ✓ GitHub source code downloaded
- ✓ SonarQube analysis completed
- ✓ Slack notification received

## Hiring-App-Freestyle

Click:

**Build Now**

Verify:

- ✓ GitHub source code downloaded
- ✓ SonarQube analysis completed
- ✓ Slack notification received

## Final Result

| Jenkins Job          | Repository | Git Clone | SonarQube | Slack |
|----------------------|------------|-----------|-----------|-------|
| VProfile-Freestyle   | VProfile-1 | ✓         | ✓         | ✓     |
| Hiring-App-Freestyle | hiring-app | ✓         | ✓         | ✓     |

## Conclusion

Successfully created **two Jenkins Freestyle Jobs** for the VProfile and Hiring App applications.

The jobs perform:

**GitHub → Git Clone → SonarQube Code Analysis → Slack Notification**

This provides a simple CI process using Jenkins Freestyle projects.
